Merge Reporting™

Complete End-to-End Workflow Needs Using New Merge Solutions

"…Merge's latest report automation technologies will save your organization **75 minutes** *per day per Radiologist…"*

As a comprehensive workflow and clinical resulting solution, Merge Reporting is specifically designed to complete your radiological exam lifecycle. The foundation of Merge Reporting is based on industry proven technologies that have been available in the market for over 15 years.

Using cutting edge integration technologies to exchange data, Merge Reporting will seamlessly plug into your PACS system. Once data is being shared, Merge Reporting is capable of automatically launching in context, and injecting clinical data directly into the report. This results in a more accurate report, a more efficient radiologist, a more effective turnaround time, and a more satisfied referring physician.

An independent study reports that Merge's latest report automation technologies will save your organization 75 minutes per day per radiologist, improve accuracy by avoiding 86 errors per day, and has been found to decrease fatigue for the radiologist. This automation results from tight integration of Merge's RIS, PACS, and reporting systems.

Merge Reporting

Two-click reporting and tracking to optimize your costs.
With Merge Reporting you can...

Clinical Resulting
This industry proven solution for workflow and clinical reporting, provides you a state-of-the-art speech engine for voice recognition, or for standard dictation and transcription needs.

Referenced Clinical Guidelines
Report templates include built-in referenced clinical guidelines, and are highly optimized based on input from more than one thousand physician users.

Making Better Informed Decisions
Experience fast, accurate presentation of all relevant clinical data, which can be selectively mapped into the clinical report. This includes data ingestion from HL7, XML, DICOM SR, and forms. As a result, this saves time, avoids errors, and produces reports optimized for clinical quality and billing compliance. Built-in, customizable, template specific clinical guidelines and reference data enhance report quality and efficiency.

Optimized Technologist Workflow
Technologists are automatically provided exam-specific checklists & forms per exam- whose content can be automatically injected into clinical results.

MQSA Compliant
A MQSA compliance and high-risk tracking solution includes reporting for all breast imaging modalities.

Peer Review
Integrated in the reading physician's routine workflow, this feature helps your organization exceed ACR and Joint Commission accreditation requirements for reviewing professional practices.

Report Delivery
Based on preference, communicate results via fax, email, HL7 interface, or web distribution with or without manual intervention.
